

IT Health Checks and Project Rescue

Do you have projects going off the rails, running over budget, missing deadlines, or being at risk of not meeting scope? Do you want to maximize business value, or get a sense of how a project is progressing? Our team of experts can help bring your projects back on track and ensure maximum value is realized.

By evaluating and defining proper architecture, identifying and mitigating risk, evaluating strategy and performing quality reviews, our team will work to quickly identify and address key issues. Let us help you get the gears moving again on IT projects that may have stalled, are running behind, or have become dormant.

IT health checks

Prodigy's experts provide these services as part of our Digital Program Readiness Assessment:

- **Baseline review/Health Check:** Provide a review of your digital strategy, benchmarked against industry competitors, as well as other engagements including vision, technology and rollout approach. We evaluate business architecture, business value, business objectives, application architecture, data and technology.
- **Assessment report:** Produce an independent assessment of your program that includes actionable recommendations for improving business value and project success.
- **KPI dashboard:** Deliver a summary assessment dashboard on key indicators.
- **Roadmap to recovery:** Road mapping for key leaders on change management and digital transformation, based on our understanding of your program. We evaluate readiness of stakeholders, as well as the areas of support, rollout, and customer engagement.

Project rescue and value delivery

Through the delivery of IT health checks -- to ensure business value is being realized -- we have successfully rescued numerous complex, cross functional projects at various points in their lifecycle.

We identify areas to improve business or technology investment value and then build out and execute actionable implementation road maps with exceptional technical and business consultants who possess CXO, architecture and SDLC expertise.

Rest assured, your project is in expert hands

We will become your trusted partners, work collaboratively with your existing partners and ensure *your* best interests remain the focus.

Our experts are award-winning, hands-on executives with over 25 years of progressive technology and business experience who have led practices and partnerships in business transformation initiatives. They lead the Canadian Data and Digital Business Transformation Practices for Prodigy, with a strong focus on SAP, SAP SuccessFactors, Workday, Salesforce & Dynamics CRM, Business Intelligence, Data Analytics and Cloud-Based Solutions.
